Did you know fentanyl is a deadly synthetic opioid that's driving an increase in drug overdose deaths in America?

Fentanyl is a powerful opioid nearly 50 times more potent than heroin. It's often made illegally and laced into other drugs, like heroin and cocaine, and used to make fake versions of prescription pills. You can't tell if a drug contains fentanyl just by seeing, smelling or tasting it - so it can be impossible to know if something has been laced with fentanyl.

Learn more about the dangers of fentanyl, so you can help keep yourself and your community safe.
